

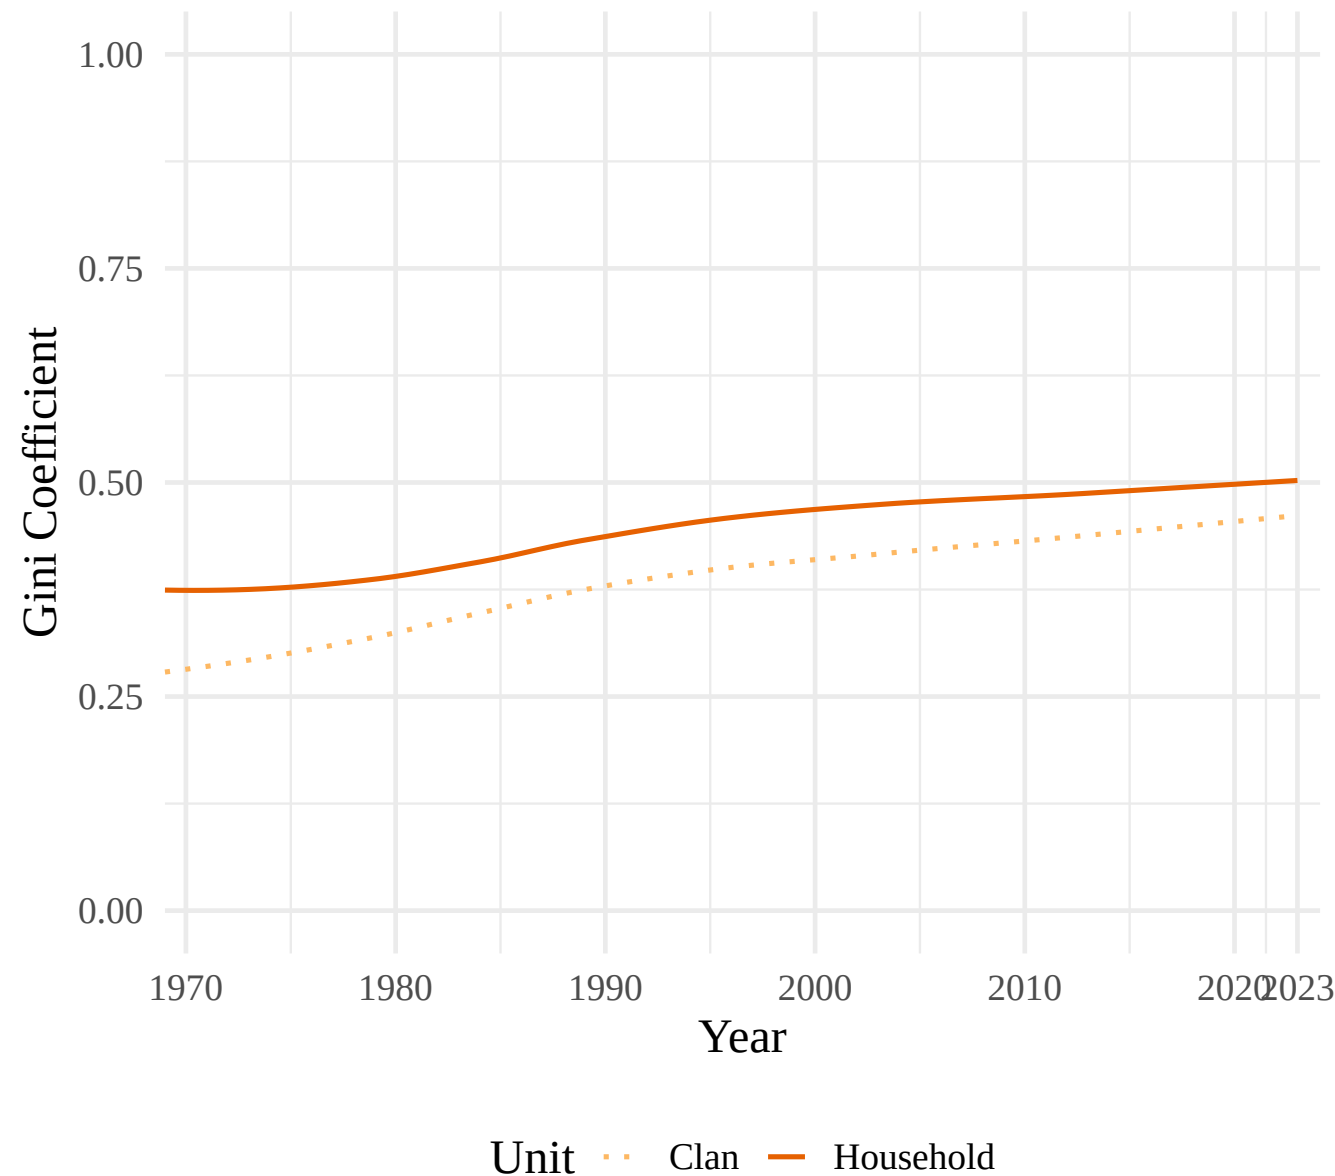

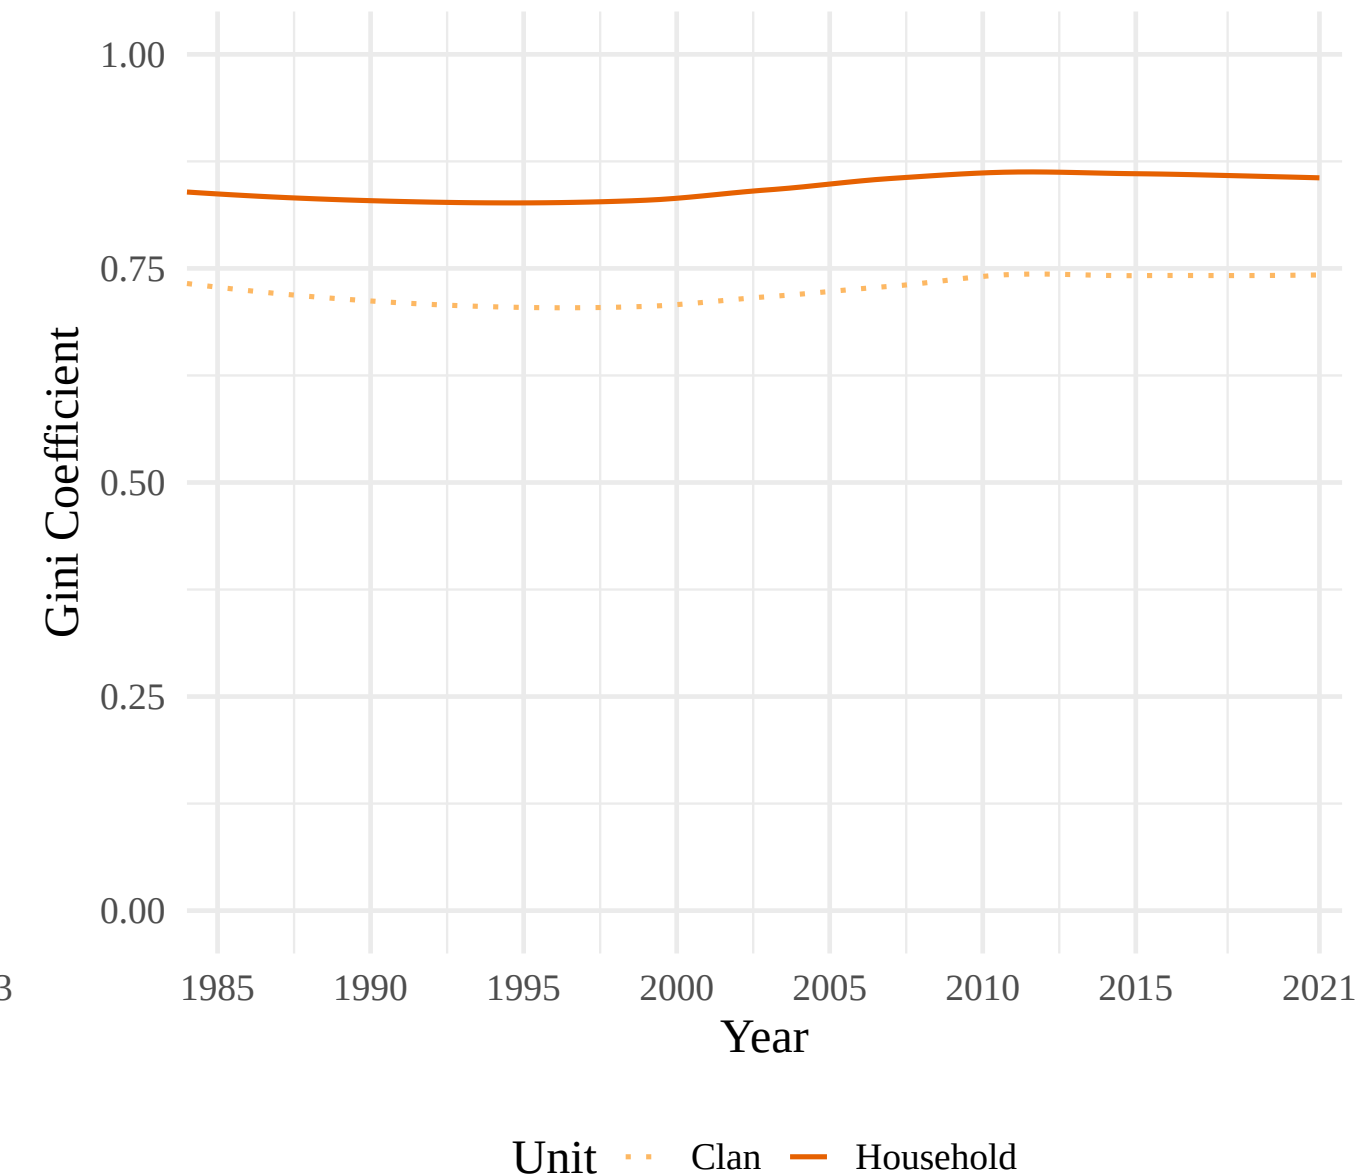

Figure 2. Income and Wealth Inequality Overtime

Panel A: Income inequality from 1969 to 2023

Panel B: Wealth inequality from 1984 to 2023

Note: Gini coefficients are estimated from weighted data using PSID family and clan weights. Weighted mean income is 107,534 for households and 415,687 for clans. Weighted mean wealth is 490,457 for households and 1,884,939 for clans (wealth excludes home equity). The Gini coefficient for income for households rose by 33.0% (0.39 in 1969 and 0.52 in 2023). The Gini coefficient for income for clans rose by 56.6% (0.30 in 1969 and 0.47 in 2023). The Gini coefficient for wealth for households rose by NA% (0.84 in 1984 and NA in 2023). The Gini coefficient for wealth for clans rose by NA% (0.73 in 1984 and NA in 2023).
